

BPT-401

Date-13/04/2021

✓ Next class - Friday (16/04/2021) - 3-4.00 pm
Saturday (17/04/2021) - 9.00 - 1.00 am

✓ Particles } classical mechanics physics
wave }

What is the nature of light?

In 1864, James clerk Maxwell
⇒ ~~Electromagnetic~~ wave.

Light is a em wave. ✓

✓ $\vec{\nabla} \times \vec{E} = -\frac{\partial \vec{B}}{\partial t}$ Faraday's law ✓

Maxwell proposed,

$$\vec{\nabla} \times \vec{B} = \mu_0 \vec{J} + \mu_0 \epsilon_0 \frac{\partial \vec{E}}{\partial t} \quad \checkmark$$

em wave in free space

speed of em wave,

$$c = \frac{1}{\sqrt{\epsilon_0 \mu_0}} = 2.998 \times 10^8 \text{ m/s}$$

light is an em wave,

Frank Hertz proved with Expt that light is
em wave.

End of 19th century, h _____.

Blackbody radiation \Rightarrow

Question about the origin of radiation emitted by bodies of matter.

heating

\Rightarrow radiating

Incident
light

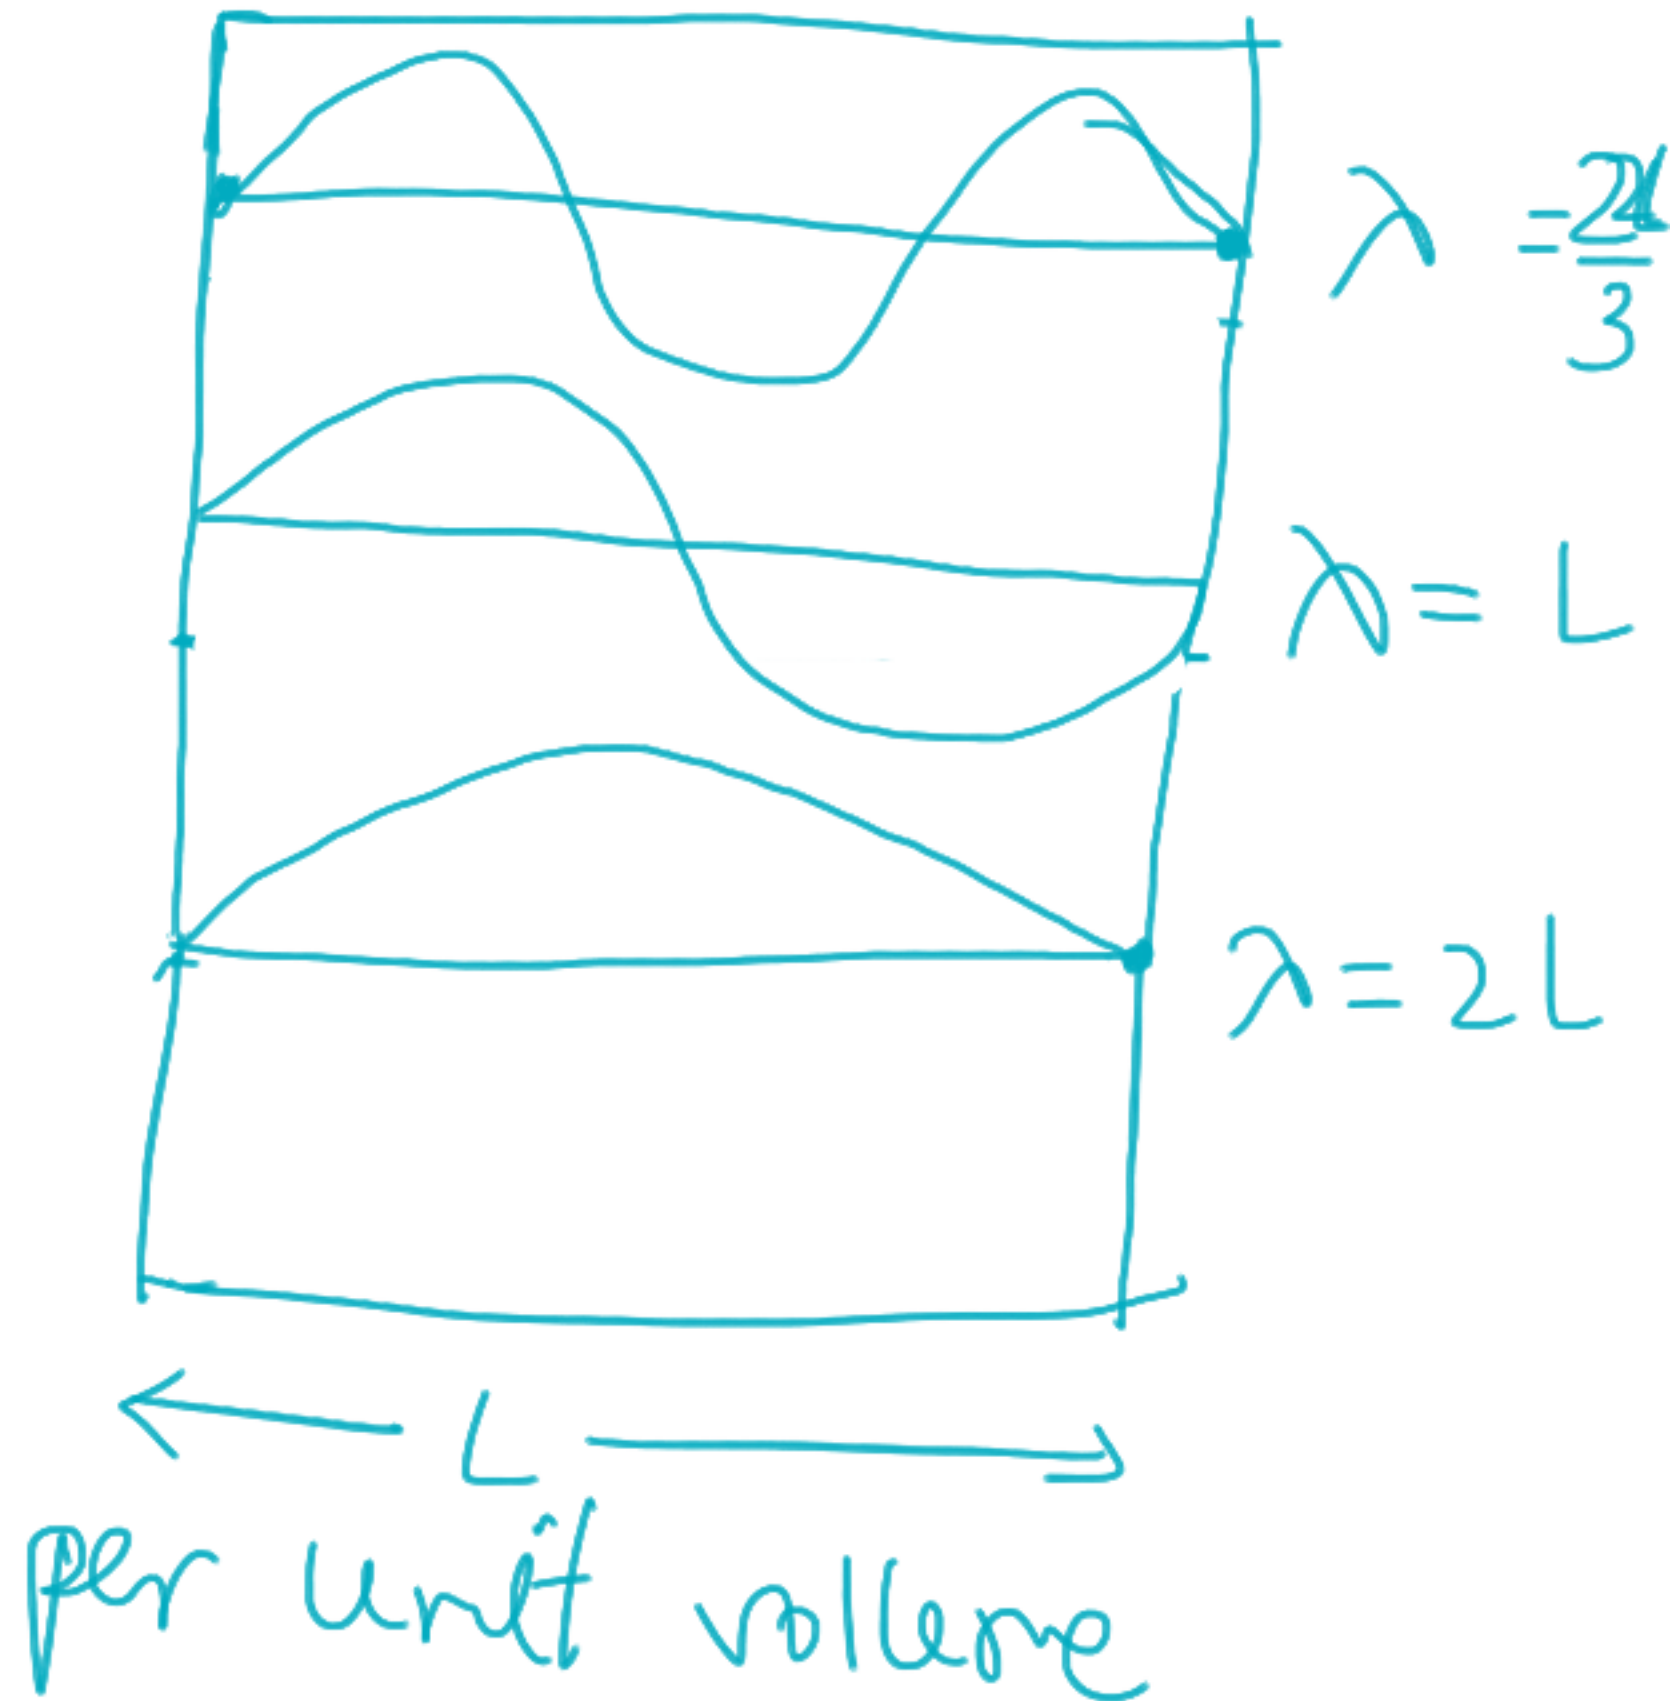

The ultraviolet catastrophe :-

✓ Light is an em wave

Lord Rayleigh, and James Jeans

T

! The number of independent standing wave $G(\nu) d\nu$ within the range ν & $\nu + d\nu$ in the cavity

$$G(\nu) d\nu = \frac{8\pi\nu^2 d\nu}{c^3}$$

Density of States

average energy \Rightarrow
 \bar{E}

classical mechanics

Theorem of equipartition of energy

avg. energy per degree of freedom on an entity

$$= \frac{1}{2} k_B T$$

✓ $\frac{3}{2} k_B T$ for ideal gas molecule —

we consider harmonic oscillator
2 deg of freedom $\left[\begin{array}{l} 1 \text{ from K.E} \\ 1 \text{ \& P.E} \end{array} \right]$ and

Avg. energy $\bar{E} = 2 \times \frac{1}{2} k_B T = k_B T$

y ✓ $u(\nu) d\nu = \bar{E} G(\nu) d\nu = \left(\frac{8\pi k_B T}{c^3} \right) \nu^2 d\nu$

Rayleigh-Jeans formula

Rayleigh-Jeans formula

observed (Expt.)

$u(\nu)d\nu$

$\nu \rightarrow \infty$
 $y \Rightarrow 0$

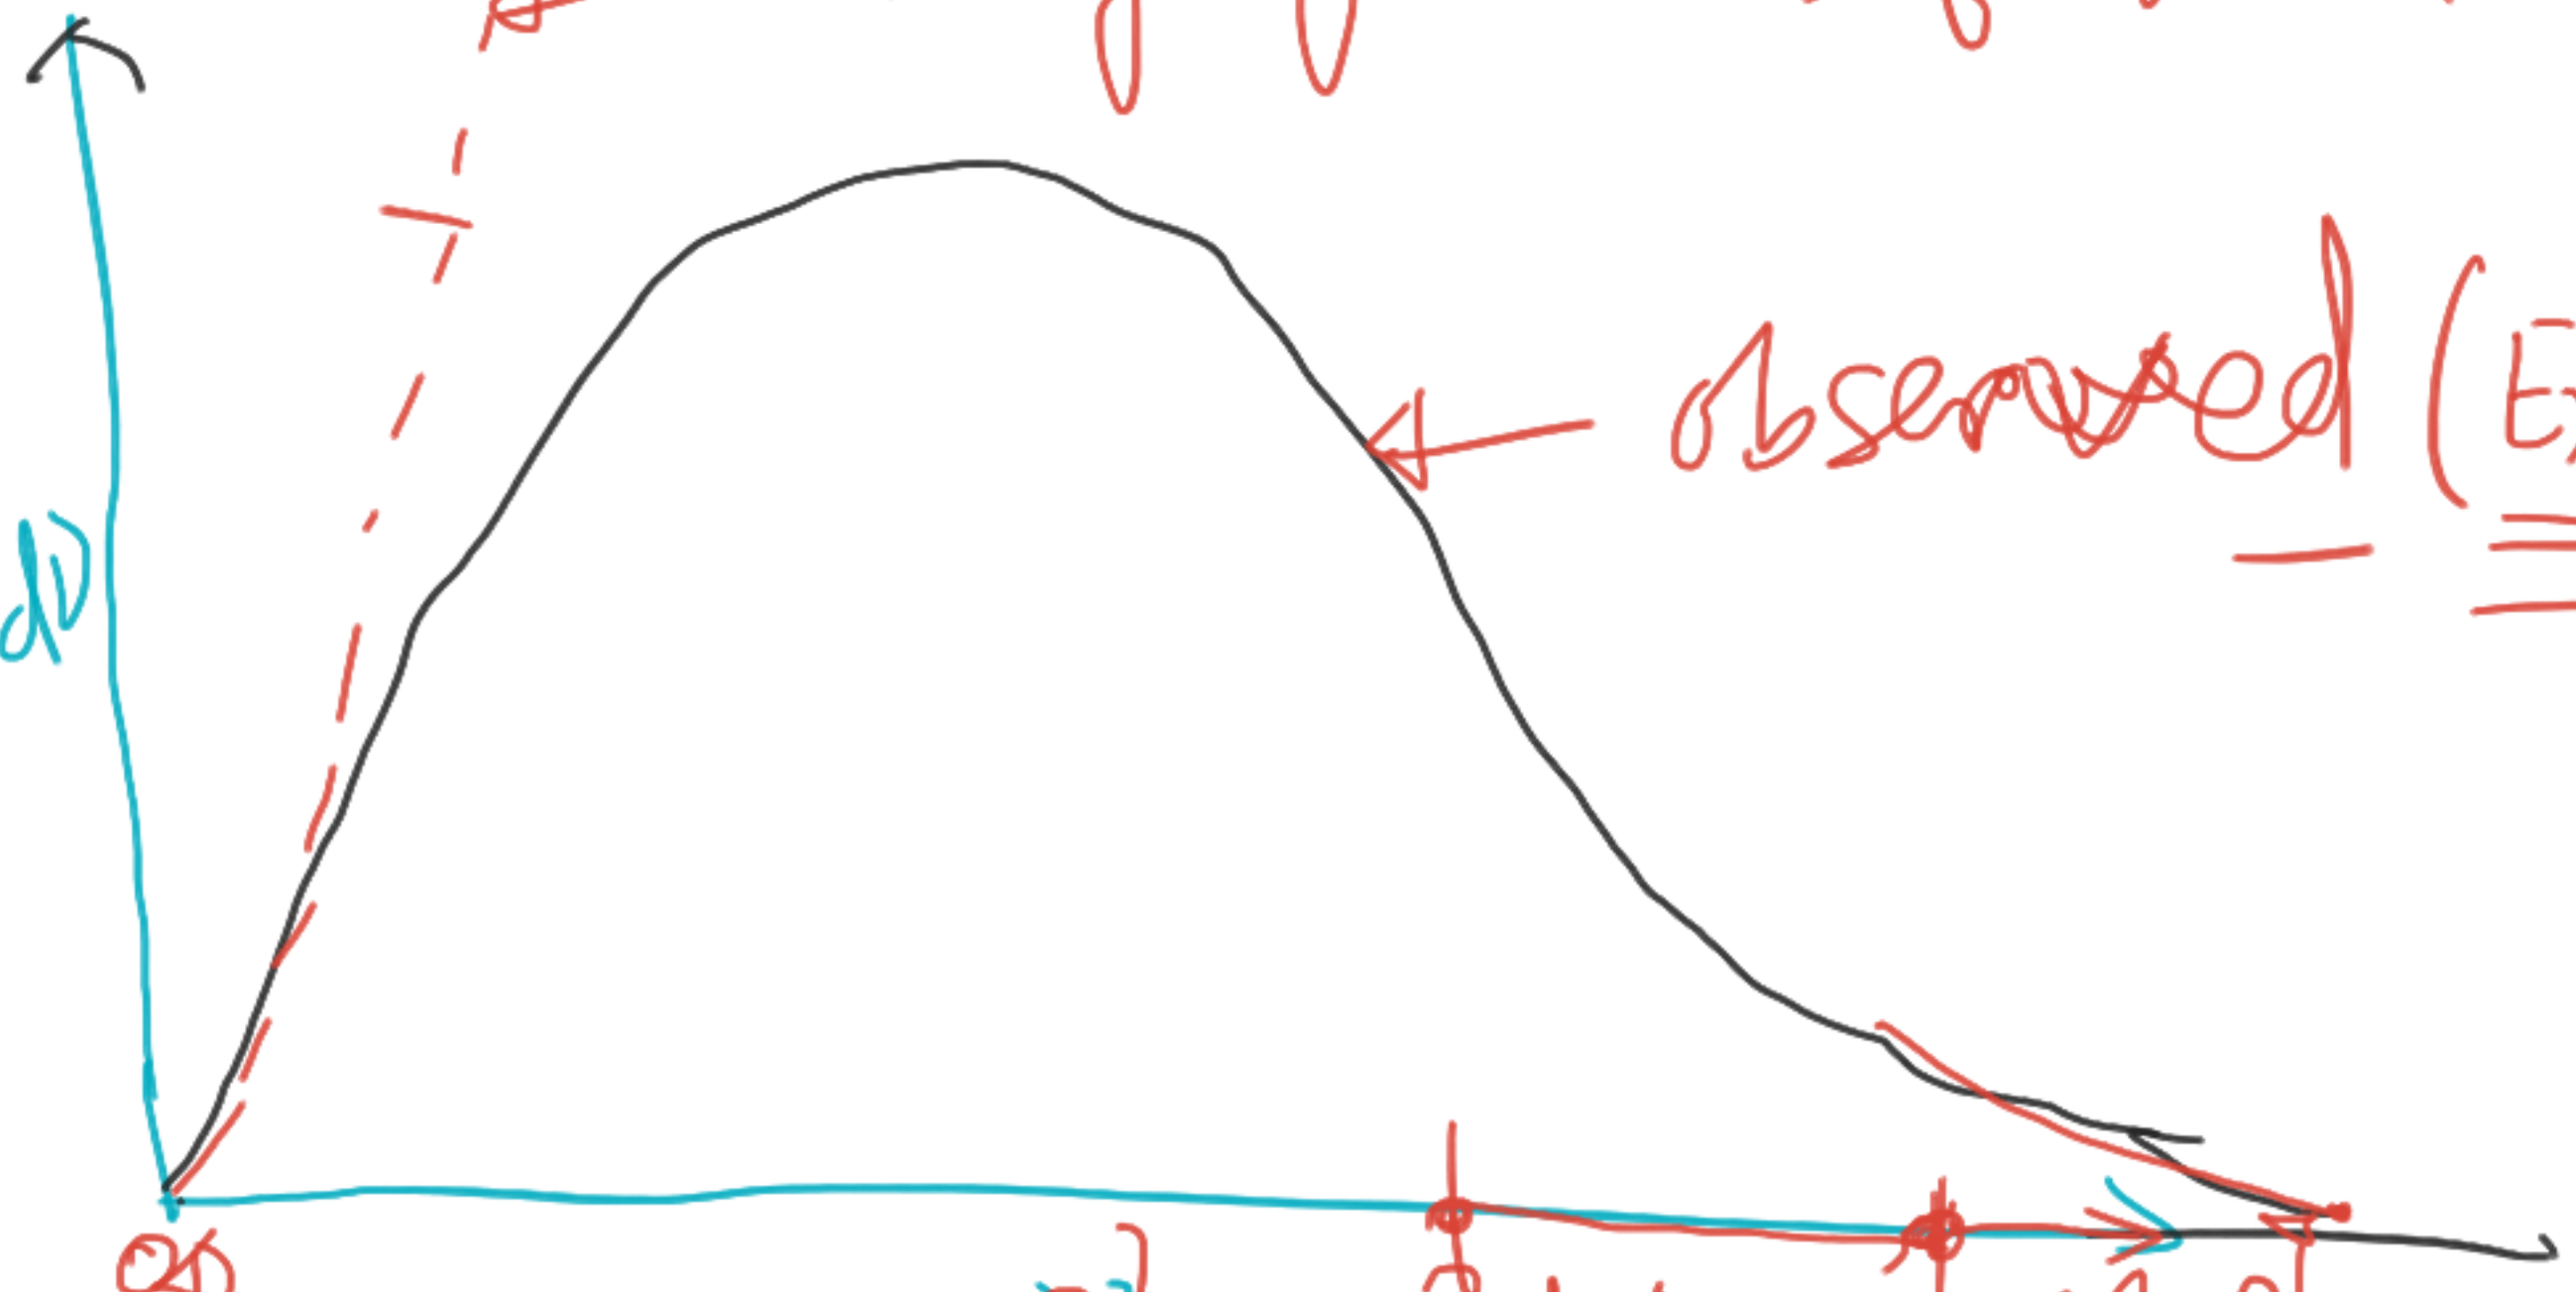

0

ν

Redissible violet

$$u(\nu)d\nu \propto \nu^2$$

$$y = ax^2 \quad \left| \quad \begin{array}{l} x \rightarrow 0, \infty \\ y \rightarrow 0, \infty \end{array} \right.$$

Rayleigh-Jeans formula \rightarrow based on
classical physics
