✓ Dielectric material :

Dipole moment  $\Rightarrow$

$\Rightarrow$  Permanent dipole moment

Polar dielectrics ✓

non-polar dielectrics ✓

Non-polar molecule

$e^-$

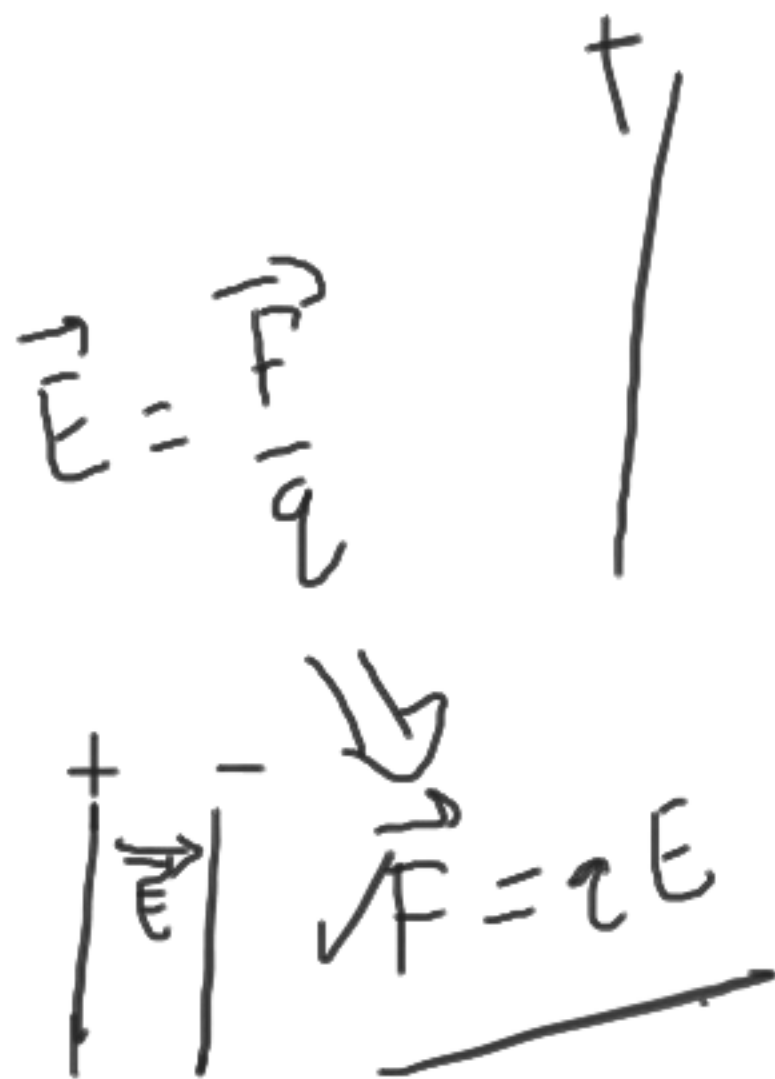

Polar molecule

HCl, H<sub>2</sub>O permanent dipole moment exists

Uniform

non-uniform

$$\vec{N} = \vec{p} \times \vec{E}$$

Case non-uniform electric field:

$$E_+ > E_-$$

$$F_+ > F_-$$

✓ Dielectrophoresis

✓ Net force on the dipole

$$\vec{F} = \vec{F}_+ - \vec{F}_- = q(E_+ - E_-) = q\Delta\vec{E}$$

$$\Delta E_x = \bar{\nabla} E_x \cdot d, \quad \underline{E_y} \text{ \& } \underline{E_z}$$

$$\Delta \bar{E} = (\bar{d} \cdot \bar{\nabla}) \bar{E}$$

$$\boxed{\vec{F} = (\vec{F} \cdot \vec{\nabla}) \vec{E}}$$

# Polarization :

non-polar dielectrics

10<sup>23</sup>

Polarized

dipole moment  $\underline{\underline{10^{23}}}$

Polarisation

$\vec{P} \equiv$  number of dipole moment per unit volume

V

$$V(\vec{r}), E(\vec{r})$$
